

# Bubble DAO

Bubble DAO Team

February 8, 2025

## Abstract

Bubble DAO is a decentralized autonomous organization (DAO) on the Solana blockchain designed to raise funds, invest strategically in AI, DefAI, and other emerging technologies. This DAO will distribute profits to the Bubble DAO holders on a transparent and pro-rata basis. This is a short to medium-term DAO that will dissolve (Bubble Pop!) after 6-9 weeks with the treasury allocated to token holders on completion. Any extension of DAO operations will be voted for or against by the community nearing its completion.

## 1 Introduction

Over the past two years, the Artificial Intelligence economy has proven its potential through hundreds of AI projects, NFTs, and AI memes. However, several gaps exist:

- **Fragmented Capital Allocation:** AI crypto creators struggle to capitalize their token in a fast-paced market; lack of proper capital allocation from market participants collapses many good trends.
- **Lack of Structured Investment:** There is no organized platform focusing solely on investing in the frontiers of AI culture, Social AI, NFT, memes, decentralized physical AI infrastructure, and DAO projects.
- **Inefficient Revenue Distribution:** Current platforms do not ensure transparent, pro-rata distribution of profits to the holders.

## 2 Solution Overview

Bubble DAO solves these challenges by:

- Raising funds through a Solana-based token issuance (Bubble DAO Token - \$BBL) on daos.world.
  - Investing in AI, DeFAI memes, Physical Infrastructure, and related NFTs with high potential.
  - Distributing profits from the sales, NFT trades, and other revenue-generating activities to benefit Bubble DAO Token holders.
  - Escrow AI architecture to buyer side in order to fill specific demands.
  - Being at the cutting edge of emerging technologies and organizations providing solutions through AI.
-

### 3 Key Features

Bubble DAO operates through a community-driven governance model. The time period for the investment is to be decided based on DAO vote.

- **AI-Powered Investment/partnerships:** Uses cutting-edge AI tools, in-house research, and social connections; the DAO identifies potential investments and allocates a percentage of the total holdings (TBD).
- **Fast and Low-Cost Transactions:** Leveraging Solana's fast and low-cost transactions means profits are distributed pro-rata based on Bubble DAO Token holdings on DAO dissolution.
- **Reinvestment Strategy:** A portion of profits is reinvested into new projects, ensuring continuous growth and innovation.
- **DAO Voting:** Voting on DAO investments.

### 4 Tokenomics

- **Token Name:** Bubble DAO Token \$BBL
- **Blockchain:** Solana
- **Total Supply:** 1,000,000,000
- **Raise Goal for Initial Round:** 1000 SOL

### 5 Initial Strategy

- 20% of the raised SOL will be allocated to the Meteora pools, and the LP tokens will be permanently burned, allowing seamless buy and sell without worrying about slippage.
  - Strategic investments in emerging concepts of AI across Solana and new/emerging blockchains.
  - DAO-to-DAO investments in DAO products to promote the growth of sister DAOs and subsequently our treasury.
  - Upcoming whitelist opportunities for other DAOs.
  - Voting mechanics for \$BBL holders to offer direction to DAO investments.
-
